

**You will need:**

- 3 or more toilet paper rolls or 1-2 paper towel rolls
- Tape and glue
- Pipe cleaner
- Scissors
- Markers and/or paint

**Directions:**

1. Cut all the rolls in half lengthwise.

2. With 2 rolls, measure 1 ¼" from the end of the roll and make a mark on each side of the cut. Cut a U shape from one mark over to the other mark. These 2 rolls will make up the head and tail sections of your millipede.

3. Along the edges of all your rolls cut ¼" wide x ¾" long strips to make the legs of the millipede.

4. On the inside of the rolls, tape each roll together. Use as many rolls as you want to make a longer millipede!

5. Fold the legs out.

6. Color and decorate the body however you want. For a more realistic millipede, I drew on body segments so that each segment has 2 pairs of legs just like millipedes do!

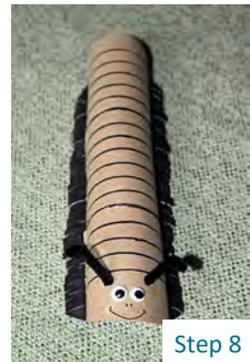

Step 6

7. Decorate the head with pipe cleaner antennae and draw on the face.  
**Optional:** Use wiggly eyes instead of drawing on eyes.

Step 7

8. Share your creation on our “Adventure in EdZOOcation” Facebook page or tag the North Carolina Zoo at #NCZOO or #NCZOOED. Happy decomposing! :)

Step 8
